6 hr | 23 videos | 65 Exercises | 310K+ | 5100 XP

What you'll learn

Description

Tableau is a widely used business intelligence (BI) and analytics software trusted by companies like Amazon, Experian, and Unilever to explore, visualize, and securely share data in the form of Workbooks and Dashboards. With its user-friendly drag-and-drop functionality it can be used by everyone to quickly clean, analyze, and visualize your team's data.

PREREQUISITES

There are no prerequisites

Read More

1 Getting Started with Tableau

100%

You will get an understanding of Tableau's fundamental concepts and features: how to connect to data sources, use Tableau's drag-and-drop interface, and create compelling visualizations. You will explore an Airbnb dataset for the city of Amsterdam.

✓ Complete

2 Building and Customizing Visualizations

100%

Let's take it up a level and review the core concepts required for analyzing and exploring data in Tableau. You'll learn how to slice and dice data with filters, create new columns using your own calculated fields, and aggregate dimensions and measures in a view. You will be working with education, social and infrastructure data.
